

CORPORATE PRESENTATION / 2026

Analytical technologies. International access.

Parts, consumables, lamps and laboratory equipment —
connected by technical knowledge and global sourcing.

From science to solutions.

THE AMERICAS & EUROPE

advancedlifesci.com

WHO WE ARE

Connecting laboratories with the right technology.

Advanced Life Sciences connects manufacturers, suppliers and laboratories through analytical technologies, international sourcing and commercial support. Our portfolio supports organizations working in scientific, pharmaceutical, biotechnology and regulated environments.

We bring together instrument parts, preventive-maintenance kits, consumables, specialized lamps and laboratory equipment. Product identification, application context and sourcing alternatives guide our work — from the first inquiry to a clearly defined quotation.

More than supplying technology, we connect science, markets, and opportunities.

Technical understanding

Part numbers, instrument models and application requirements guide product selection.

International access

Global sourcing and distribution connect laboratory needs with manufacturers and suppliers.

Clear commercial support

Product specifications, availability and supply conditions are defined in the quotation.

OUR PORTFOLIO

Precision starts with the right components.

Instrument parts & PM kits

Pumps, seals, valves, fittings, tubing and preventive-maintenance components for analytical platforms. Selection follows the part number and instrument model.

Deuterium lamps

UV light sources for HPLC, UHPLC and UV-Vis instruments, including DAD and VWD detectors. Original and compatible alternatives are identified separately.

Chromatography consumables

Columns, vials, filters and other consumables selected according to the analytical method and instrument requirements.

Analytical equipment / Raytor

Dissolution testing, transdermal diffusion and laboratory automation. Advanced Life Sciences USA is an Authorized Distributor of Raytor.

Manufacturer and platform references identify applications; they do not imply authorization beyond the explicitly stated Raytor relationship. Compatibility and specifications are product-specific.

LABORATORIES & APPLICATIONS

Different disciplines. A shared need for continuity.

We support analytical workflows in research, development and quality control. Each inquiry is assessed in the context of the equipment, method and operational needs of the laboratory.

Pharmaceutical & biopharmaceutical

Research, development and quality-control workflows.

Chemical & materials science

Composition, purity and material characterization.

Environmental

Water, soil and air analysis workflows.

Life sciences & biotechnology

Analytical technologies for scientific research.

Food & beverage

Testing, quality control and analytical screening.

Clinical research & diagnostics

Analytical support for research laboratories.

Science, information and technology

Pharma Intelligence extends the ecosystem into information and compliance for pharmaceutical environments. Depth Stride is a separate B2B document-analysis and specialized-research initiative under development.

LET'S CONNECT

Your next requirement. Our next conversation.

Share the part number, equipment model, quantity and intended application. Our team can help identify sourcing alternatives and prepare a quotation with the relevant product and supply details.

01

Identify

Part number, instrument model and application.

02

Define

Quantity, destination and technical requirements.

03

Connect

Discuss sourcing and request a quotation.
